

HIV in Switzerland – past and present

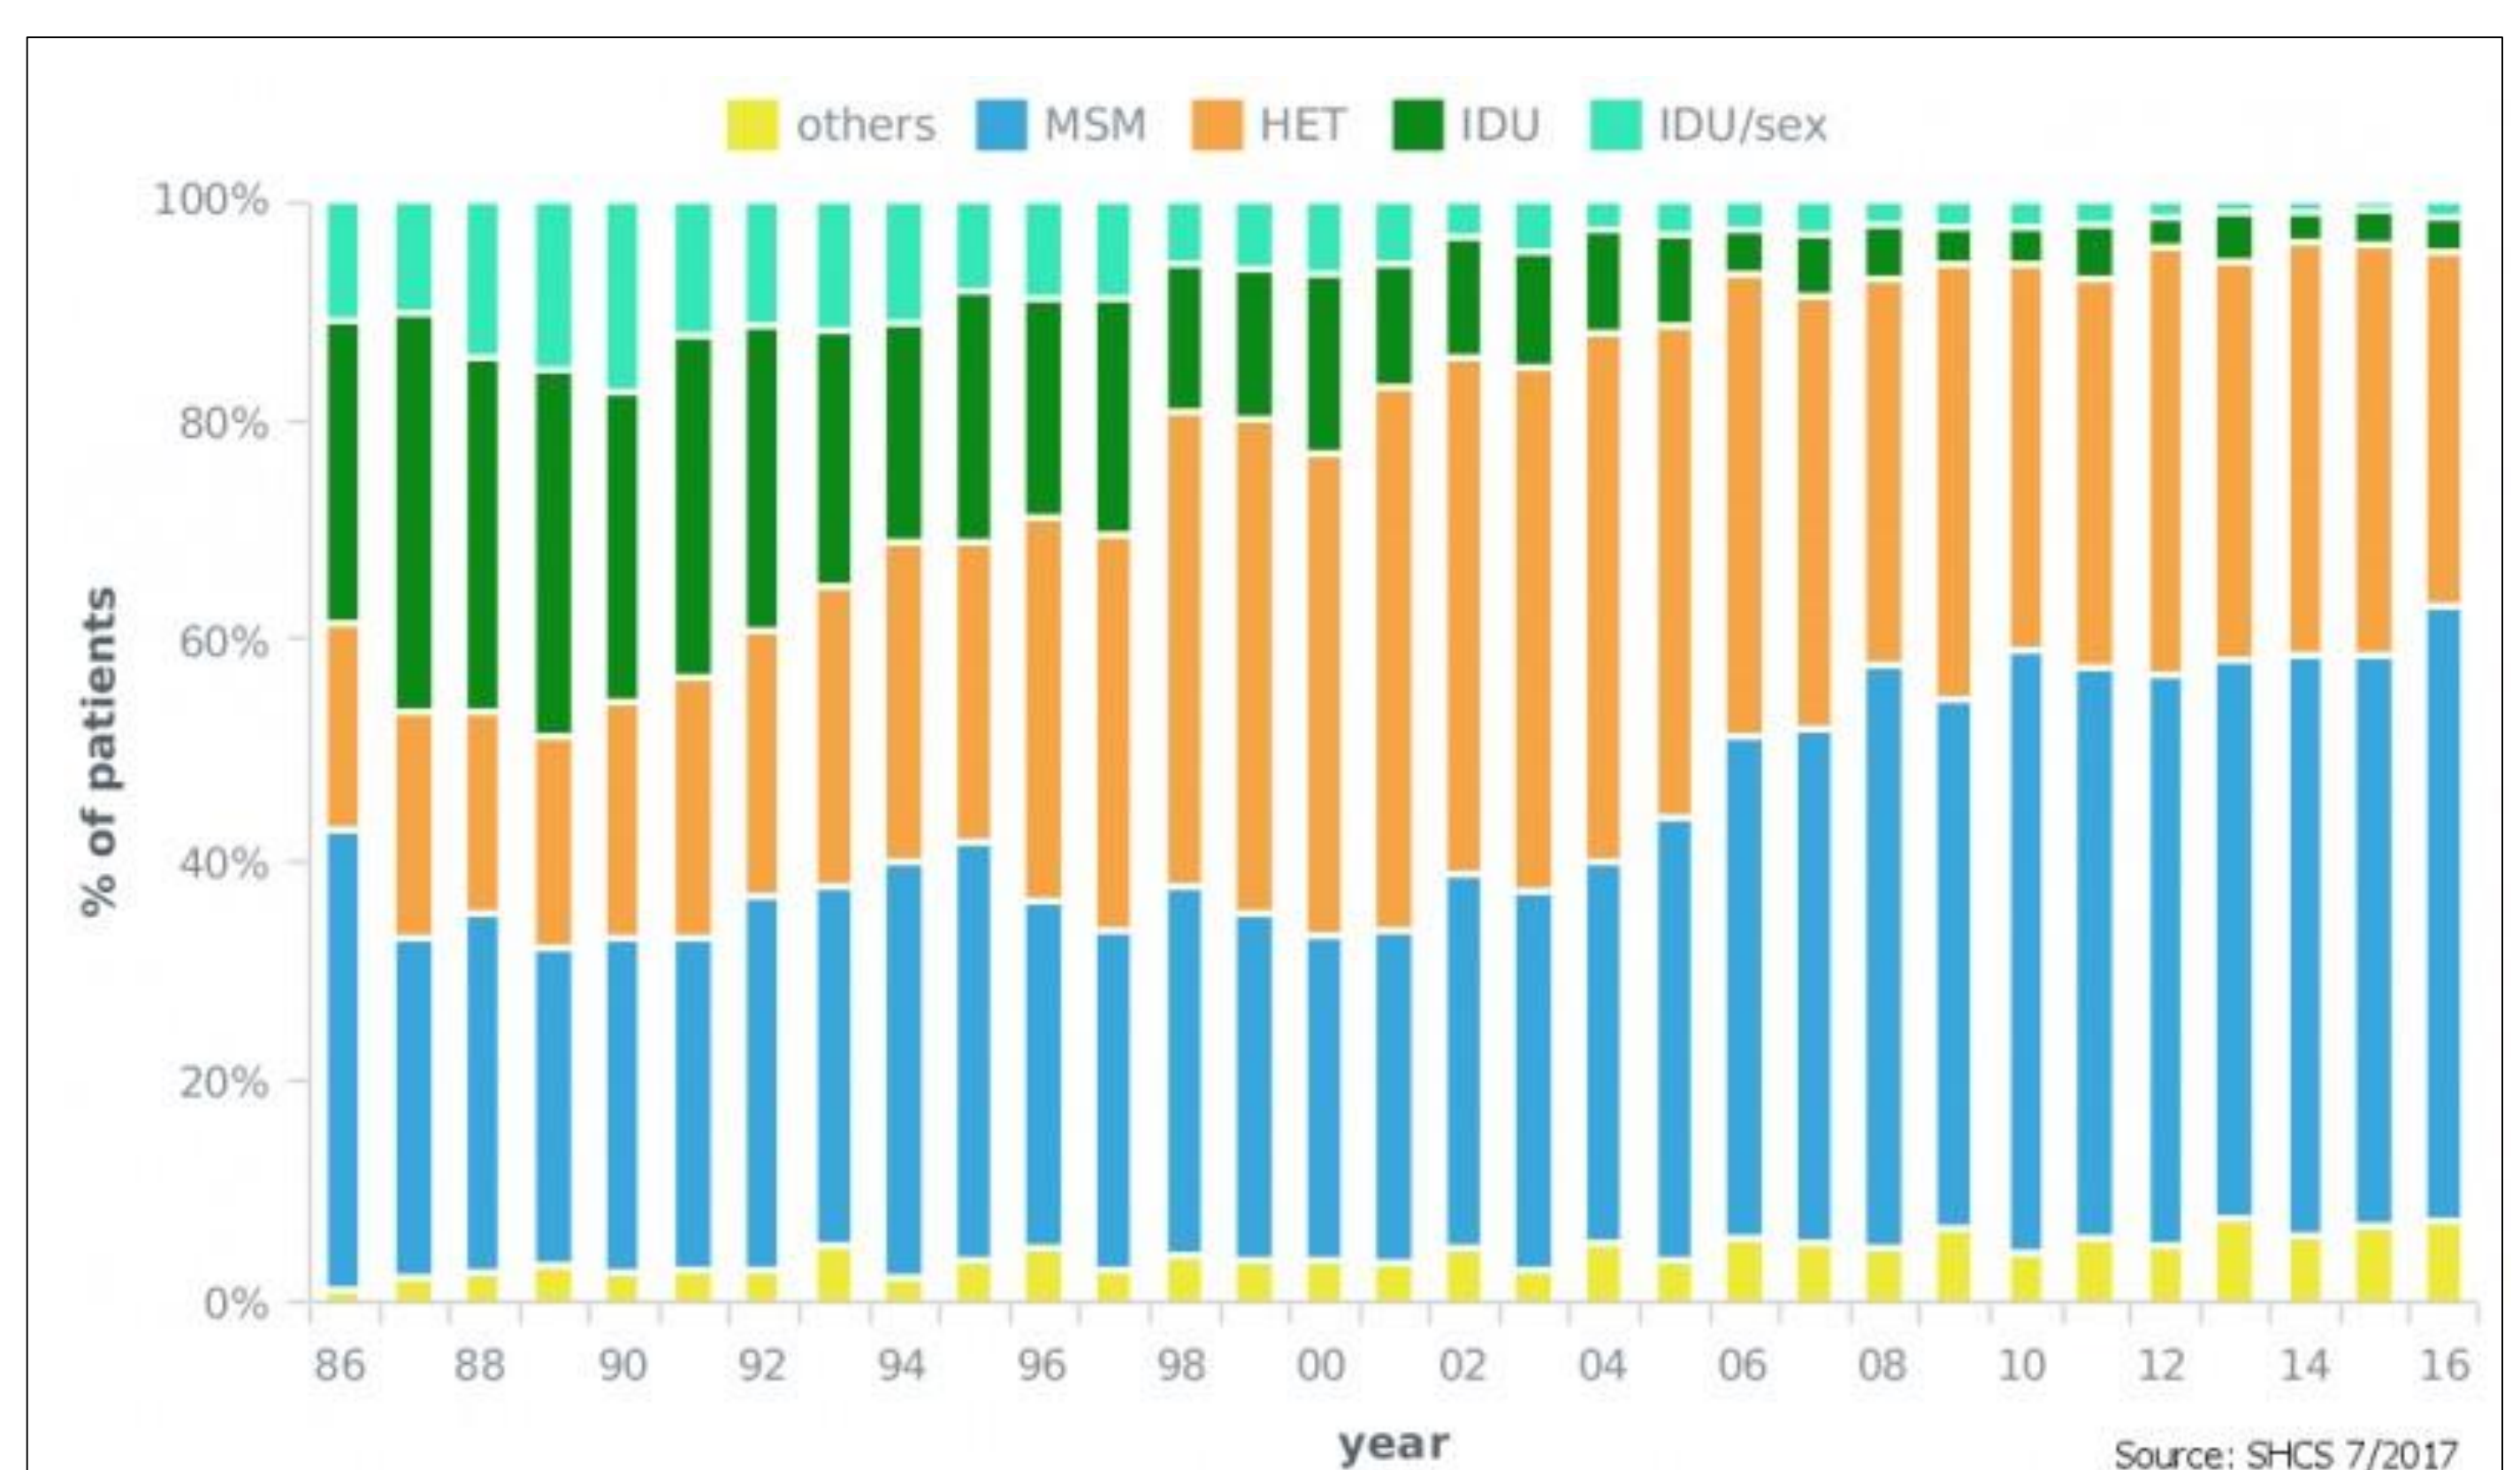

Today 16.600 people with HIV living in Switzerland
(Incidence 2017: 5.2/100.000)

Incidence has declined over the years, however the decline was mainly in the pre-ART period (prevention). HIV-testing has increased steadily in all population groups (small box)

Populations at risk – Transmissions groups (1986 – 2016)

After a decline of IDU and an increase of proportion of MSM among new diagnoses, the proportions seem stable in recent years

90 – 90 – 90 ?

2012
82 – 91 – 97
N = 13.500 – 12.300 – 11.900

Estimated number of people living with HIV: **16.500***

European Centre for Disease Prevention and Control, 2018
